Cor Jesu College Inc.,
Sacred Heart Avenue, Digos City

Subject: Letter of Intent – Development of Clearance Web-Based System

Dear Sir/Madam:

Good day!

We, the undersigned Bachelor of Science in Computer Science students of **Cor Jesu College**, are currently enrolled in the Software Engineering course. As part of our academic requirement, we are tasked to design and develop a system that will address operational needs and improve service efficiency within a selected office in the institution.

In this regard, we would like to formally express our intent to propose and develop a **Clearance Web-Based System** for the institution. The proposed system aims to digitize and streamline the student clearance process across multiple departments and offices, replacing the traditional manual approach with an efficient, centralized, and web-based platform. Specifically, it seeks to:

1. Digitalize the clearance workflow across the following offices: Guidance, Clinic, Library, Prefect of Discipline, Cashier, Registrar, SSC, CJC Store, and Computer Laboratory
2. Facilitate clearance processing for both Academic Clubs and Non-Academic Clubs
3. Enable role-based access for students, department signatories, and administrators
4. Provide real-time tracking of clearance status and pending requirements
5. Maintain a centralized and secure record of all clearance transactions

Relative to this, we humbly request permission from your good office to conduct initial data gathering activities, which may include interviews, observation of current processes, and collection of non-confidential operational information necessary for system analysis and design.

Rest assured that all gathered data will be treated with utmost confidentiality and will be used strictly for academic purposes only.

We are hoping for your support and approval in the development of this project, which we believe will be beneficial to the institution and its stakeholders.

Thank you very much, and we look forward to your favorable response.

Respectfully yours,

JAN MIKO GUEVARRA
Student, CS Software Engineering1
