Program Design

LIBRARY ENTRANCE MONITORING SYSTEM CHECKLIST

NAME OF ACTIVITY LEMS: Library Entrance Monitoring System

IMPLEMENTATION DATE February 2026 – April 2026

VENUE Learning Information and Resource Center
Cor Jesu College, Inc., Digos City

PARTICIPANTS Rhea Grace P. Balatero
John Mark P. Limsan
Library Staff and Administrators

LIBRARY ENTRANCE MONITORING

Purpose:

This checklist outlines the initial features of the Library Entrance Monitoring System (LEMS) to be reviewed and approved by the designated office prior to full system development and deployment.

Features	Details	Approve
Multimodal ID Scanner	Support for barcode, QR code, or through webcam scanning to facilitate rapid, contactless student check-in.	
Interactive Kiosk Interface	A user-facing display providing real-time entry status (Success/Denied) and welcoming messages.	
Manual Entry Override	A keyboard option allowing students with damaged or lost IDs to enter their ID number manually.	
Live Occupancy Counter	A real-time dashboard widget showing the current number of patrons inside the library to manage capacity.This can be seen in the Admin dashboards	
Admin Control Panel	Centralized hub to add, modify, or deactivate student records and manage system configurations.	

Bulk Data Integration	Tools to import/sync student master lists via CSV or direct integration with the School Registrar database.	
Academic Term Management	Settings to define School Years, Semesters, and holiday schedules for accurate data partitioning.	
Departmental Mapping	Ability to categorize users by Department, College, or Program for granular institutional reporting.	
Automated Analytics	Generation of usage reports (Daily/Weekly/Monthly) with visual charts for peak-hour analysis.	
Role-Based Access (RBAC)	Tiered login permissions (e.g., *Super Admin* for data deletion vs. *Librarian* for viewing reports).	
System Audit Logs	A "black box" record of all administrative actions (who changed what and when) to ensure accountability.	
Offline Synchronization	Ability to store scan data locally during internet outages and auto-sync once the connection is restored.

CIEMAVIL S. ALCAIN, MIT
Instructor, CS Software Engineering 1

Noted by:

MA. LORENA A. ABANGAN, PhD
Director, Learning and Information Resource Center

System Navigation/Manual

Library Monitoring System: Operational Manual

1. The Kiosk Experience (Front-End)

- **The Idle State:** The screen displays a dynamic "Screensaver" mode with ambient animations, rotating greetings (e.g., "Welcome, Bibliophiles!"), and a clear call-to-action: **"Touch or move the cursor to begin."**
- **The Landing Page:** Once triggered, the system transitions to the scanning interface.
    - **Privacy-First Logging:** When a student logs in, their name/photo appears briefly. After **5 seconds**, the screen automatically resets to the Idle State to protect student data.
- **Registration:** New users can click a "Sign Up" button which triggers a pop-up form. This includes a **live webcam capture** for profile photos. Once saved, they are redirected back to the scanner to log in for the first time.
- **Multi-Method Entry:** Students can use the webcam barcode/QR scanner or manually type their ID number/Name if their card is missing.

2. Admin & Staff Portal (Back-End)

- **Secure Access:** A discrete Admin login button is located in the top-right corner. Clicking this opens a secure pop-up for credentials.
- **The Dashboard: * Student Management:** Full CRUD (Create, Read, Update, Delete) permissions.
    - **Violation Tracking:** A dedicated ledger to log library offenses and track pending penalties.
    - **Section Management:** Admins can define library areas (e.g., *Filipiniana, Periodicals*).
- **The Statistics Tab:** A separate kiosk-style view or report page that generates real-time heatmaps and charts showing which sections are most utilized.

System Feature Checklist

Feature	Details	Status
Smart Idle Animation	High-energy greetings with a "Touch to Start" prompt.	[ ]
Privacy Auto-Reset	Success message/recent log-in disappears after **5 seconds**.	[ ]
Multimodal Scanner	Support for barcode, QR code, or webcam scanning.	[ ]
On-Site Registration	Pop-up sign-up form with **Integrated Photo Capture**.	[ ]

Manual Override	Keyboard input for damaged IDs or manual search.	[ ]
Violation & Penalty Ledger	Specific module to record and track student library offenses.	[ ]
Section Usage Monitor	Ability to add/track sections (Filipiniana, Reference, etc.).	[ ]
Live Occupancy Counter	Real-time widget in Admin Dashboard showing current patrons.	[ ]
Admin Control Panel	Central hub for student record modification and system config.	[ ]
Automated Analytics	Statistics page for peak hours and section-specific usage.	[ ]
Role-Based Access	Tiered permissions (Admin vs. Staff) for data security.	[ ]
Audit Logs	A "Black Box" recording all administrative changes.	[ ]
