PROPOSED PROJECT / RESEARCH FOR THE SCHOOL YEAR

A proposed project or research is an initiative or enterprise conducted by an organization which is carefully planned to achieve a specific purpose relative to the objectives of the organization and the vision, mission and core values of the institution. A project or research to be successful, it must be clear in its goals and intended beneficiaries. It must as well be specific, measurable, achievable, realistic and time-bound (SMART). Duly recognized student organizations are encouraged to come up with at least one research or project a year.

NAME OF THE ORGANIZATION COMPUTER SCIENCE SOFTWARE ENGINEERING 1		**ACRONYM** CS SE1
NAME OF THE COLLABORATORS (if there is any) College of Computing and Information Sciences - Association of Computer Studies Students		
TITLE OF THE PROJECT / RESEARCH Library Entrance Monitoring System (LEMS)		
OBJECTIVES OF THE PROJECT / RESEARCH 1. To design and develop an automated Library Entrance Monitoring System that improves efficiency, accuracy, and security in tracking library users. 2. To digitally capture entrance and exit logs of students and visitors. 3. To monitor daily library attendance, including peak hours and user categories. 4. To generate automated reports for administrative use. 5. To enhance security by providing verified and timestamped entry records. 6. To provide a user-friendly interface for both library staff and administrators.		
TIME FRAME 2nd Semester, Academic Year 2025–2026 (February 2026 – May 2026)	**TARGET BENEFICIARIES** • Library staff and administrators • Students and library users	**LOCATION OF THE PROJECT / RESEARCH** Learning Information and Resource Center, Cor Jesu College, Digos City
BRIEF DESCRIPTION OF THE PROJECT / RESEARCH The Library Entrance Monitoring System (LEMS) is designed to automate and streamline the tracking of individuals entering and exiting the library. The system will provide digital logs, monitor attendance trends, and generate administrative reports to support efficient library management. LEMS aims to improve security, optimize resource usage, and ensure timely access to data for the library staff, ultimately enhancing user experience and operational efficiency.		
STATE THE SIGNIFICANCE OF THE PROJECT OR RESEARCH The LEMS project is significant as it addresses the need for a more efficient and secure library management system. By automating entrance monitoring, the project reduces manual work, improves accuracy in record-keeping, and helps staff make data-driven decisions. It also strengthens security protocols and ensures a smoother library experience for students and visitors. The system supports the institution's commitment to innovation, technology integration, and student welfare, making library operations more professional and effective.		
PROJECT OR RESEARCH CATEGORY: ___ Membership Recruitment ___ Organization Development and Team Spirit ___ Student / Member Development (KASH) _/_ Student Welfare ___ Peer Support ___ Conference / Conventions Organization and Management ___ Publications, Communication, and Information ___ Others _____ ___ Funds Generation ___ Socials and Recreation ___ Sports and Athletics _/_ Facilities Improvement ___ External Relations, Linkages and Networking ___ Community Service ___ School Administration – Student Relation		

PROJECT OR RESEARCH EVALUATION:

Criteria	**Rating**				**Remarks** Reserve for SSC)
	Very High	**High**	**Moderate**	**Low**	
Consistency with vision, mission, and values of the Institution					
Linkages with academic / curricular programs					
Opportunities for students to learn and use knowledge and skills					
Relevance to organizational objectives					
Contributions toward developing group identity and unity					
Novelty and creativity of project concept and execution					
Capacity to generate maximized member participation					
Enjoyment and satisfaction of activity participants					
Easy access to needed resources for project implementation					

Note:
A proposed project or research having a total of five (5) very high or high ratings is considered a SMART project and is recommended for implementation.
